PRODUCT DESCRIPTION

Cubicle doors add additional privacy to any cubicle workspace. Each door consists of a thick sheet of frosted acrylic inside a lightweight aluminum frame. A universal mounting bracket (included) attaches to the side of the adjoining panel. This allows the door to glide easily when opening or closing. Because of its design, these cubicle doors attach to any cubicle panel regardless of thickness

This door features a frosted acrylic panel. Meaning it is translucent, but not transparent. This allows light to pass through without compromising privacy.

These cubicle doors are available in widths of 36", 42", and 48". Also, they are available in two different heights of 52" and 65"—industry standard heights for cubicle workstations.

The price you see on the page includes shipping costs. Please note: It is important you verify both the height and width of the cubicle doors needed prior to order. Buyer assumes responsibility for all shipping costs if returned.
