PRODUCT DESCRIPTION

Our **eSCAPE** line of acoustic ceiling panels are made in the USA!

Fewer distractions at work means better productivity throughout the day. This **eSCAPE Acoustical Products** line shows a set of twelve (12) circle-shaped acoustic ceiling panels. Not only are ceiling panels a decorative way to visually enhance the office, but also effective at getting rid of distracting office noises.

PET (Polyethylene Terephthalate) is a light, soft, felt-like material **made with 100% recycled plastics** such as soda or water bottles plastics. Instead of ending up in landfills or our oceans, the plastics in these products are remade into different colored 1/2" thick panels. Those panels are then cut into custom shapes and sizes to be used to reduce noise pollution and annoying distractions in the office.

The sound absorbing material in our acoustic ceiling panels is extremely effective in reducing ambient noise! It has a NRC (Noise Reduction Coefficient) rating of .75 or about 75% of high decibel noise.

PET material has no harmful emissions, has no scent, nor is it flammable. In fact, the ASTM gives it a fireproof rating of E-84 CLASS A. An E-84 CLASS A rating the safest rating acoustic ceiling panels can have. Not only are they durable, but easy to clean and disinfect as well.
